Guess the Number Game

🎯 Objective

The goal of the game is to guess a randomly generated number within a specific range. The program gives hints whether your guess is too high or too low until you find the correct number.

⚙️ How the Game Works

1. The program picks a random number between a given range (for example, 1 to 100).
2. The player tries to guess the number by typing input.
3. The program checks the player's guess and provides feedback:
   - 'Too High' → if the guess is greater than the number.
   - 'Too Low' → if the guess is smaller than the number.
4. This continues until the player guesses correctly.
5. The game shows the total number of attempts it took to guess right.

Blackjack Game Explanation

Blackjack (also called 21) is one of the most popular casino card games. The goal is simple: Get your cards' total value as close to 21 as possible — without going over. You play against the dealer (computer), not against other players.

⚙️ Objective

Beat the dealer by having a hand total closer to 21. If your total goes over 21, you lose immediately (that's called a bust).

⚙️ Card Values

Card	Value
2–10	Face value
J, Q, K	10
A (Ace)	1 or 11 (whichever benefits you more)

Example: If your hand is A + 9, your total is 20. If your hand is A + 9 + 5, Ace will now count as 1 (so total = 15).

⍰ Game Flow (Step by Step)

1. 1. The Deck
   There's a standard deck of 52 cards. The deck is shuffled at the start.
2. 2. Initial Deal
   Player gets 2 cards. Dealer gets 2 cards (one card is hidden). Example:
   Player: [10♠, 7♥] → Total = 17
   Dealer: [K♣, ?]
3. 3. Player's Turn
   Player decides to 'Hit' (take another card) or 'Stand' (stop taking cards). If total goes over 21, player busts and loses immediately.
4. 4. Dealer's Turn
   Dealer reveals hidden card and hits until total ≥ 17. If dealer busts, player wins.
5. 5. Compare Hands
   Both totals are compared:
   - Player > 21 → Player busts → Dealer wins
   - Dealer > 21 → Dealer busts → Player wins
   - Player total > Dealer total → Player wins
   - Dealer total > Player total → Dealer wins
   - Both equal → It's a draw (push)

⍰ Example Game Round

Example 1:
Player: [A♠, 8♦] = 19
Dealer: [K♥, 9♣] = 19 → It's a tie!

Example 2:
Player: [10♠, 8♥, 4♦] = 22 → Bust
Dealer: [K♣, 6♦] = 16 → Dealer wins (player busted)
