Problem Statement

Write A Program To Show Such Type Of Layout Of Number And Square.

Expected Result:

```
Number    Square
1          1
2          4
3          9
4         16
5         25
```

Problem Statement

Write A Python Program to get 6 subject marks from the user and calculate total and average of that marks. And display to user.

Problem Statement

Write A Python Program To Add Number From List That Are Greater Than 5 And Less Than 10

Problem Statement

Write A Python Program To Display All The Student Name Except With Start ‘f’ Char

---

Problem Statement

Write A Python Program To Sort Student Name In Ascending Order In List And Student Should Display Which Contain Only 5 Character

---

Problem Statement

Write A Python Program To Get 2 Number From The User And Display Maximum Number we will provide two method to solve this problem statement:

Problem Statement

Write a Python program to display following output using for loop

```
*
* *
* * *
* * * *
* * * * *
```

Problem Statement

Write Python Program To Get Password From User And Make Sure That Password Should Contain Number And Alphabetic

---

Problem Statement

Write A Program To Get 6 Number In The List And Sum That Number

---

Problem Statement

Write A Program To Get 6 Number In The List And Display All Number And Then Clear List And Then Display

---

Problem Statement

Write A Program That Performs All Compound Assignment Operations On An Integer

---

Problem Statement

Write a Python program to show a message in this format using print function. Each character should one tab distance

```
A
B       C
D       E       F
G       H       I       J
K       L       M
N       O
P
```

Problem Statement

Write A Python Program to store name, address, contact in dictionary, and then update his/her contact number

---

Problem Statement

Write A Python Program To Get 3 Number From User And Put In The Following Equation:
a + b + ca / b (2a + 3b)

Problem Statement

Write A Python Program To Calculate The Area Of Circle Using Formula Πr^2

Problem Statement

Write A Python Program To Get 5 Number From User In Array And Sum All Number And Display

---

Problem Statement

Write a Python Program to get 5 number from user in array, find the maximum number

---

Problem Statement

Write A Python Program To Check Alpha Character, Whether Vowel Or Consonant.

Problem Statement

Write a Python program get name of week and show “Holiday” if user input Sunday

---

Problem Statement

Write A Python Program To Get Two Number And Operator From The User To Perform Arithmetic Operation

---

Problem Statement

Write A Python Program To Get Student Marks , If Marks Is Less Than 40, It Display “Fail” Otherwise “Pass”.

Problem Statement

Write A Python Program To Check A Number, Whether It Is Even Or Odd Number.

Problem Statement

Write A Python Program To Check A Year, Whether It Is Leap Year Or Not.

Problem Statement

Write A Python Program To Get A Number From User To Find Square Of That Number.

Problem Statement

Write A Python Program To Get Number To Check Whether It Is Positive OR Negative.

Problem Statement

Write A Program To Get Name And Age From The User And Display Name And Age On The Screen In This Format:

Expected Result:
If name is “Faisal Zamir” and age is 25 then:
Hi Faisal Zamir! Your age is 25.

Problem Statement

Write A Python Program To Get A Number From User To Check, It Is Divisible By 2 And 3.

Problem Statement

Write A Python Program To Get Marks Of Student To Find Its Grade Using This Criteria:

- = 95 Show A+ Grade
- = 80 Show A Grade
- = 70 Show B Grade
- = 60 Show C Grade
- < 60 Will Be Considered Fail

Problem Statement

Write A Python Program To Get Two Numbers From The User, Pass To Function And Find Maximum.

Problem Statement

Write A Python Program To Store Name of the Color In A List, Count That Color, And Display Result To User.

Problem Statement

Write A Python Program To Get 5 Color Names From The User In A List, Display That List, Remove Last Color, And Then Display All The Colors To User.

Problem Statement

Write A Python Program To Get 10 Names Of The Students From The User In A List, Display Those Student Names In Descending Order.

Problem Statement

Write A Python Program To Get A Sentence From The User, And Make It Capitalized.

Problem Statement

Write A Python Program To Get A Number From The User To Find The Cube Of That Number.

Problem Statement

Write A Python Program To Convert Radian To Degree.

Problem Statement

Write A Python Program To Get 5 Numbers In A List, Pass That List In A Function To Multiply And Add The Numbers, And Display Total Result.

Problem Statement

Write A Python Program To Take Age From The User To Check Whether User Is Able To Participate In Voting Or Not.
If Age Is Less Than 18, Then Don't Allow Participation. Also Show After How Many Years The Person Will Be Eligible.

Expected Result:
If user inputs 10 years:
Sorry! You cannot participate in voting, you will be able to participate after 8 years.

Problem Statement

Write A Python Program To Get A Username From The User That Should Have Alphanumeric Characters.
Then Pass That Username To A Function As Parameter To Display That Username.

Problem Statement

Write A Python Program To Get An Angle From The User And Find Its Sin And Cos Value In Radians.

Problem Statement

Write A Python Program To Generate 1 To 10 Numbers With Their Square And Cube And Also Display Their Addition (Square + Cube).

Expected Result:

```
Number   Square   Cube   Addition
1        1        1      2
2        4        8     12
3        9       27     36
...
```

Problem Statement

Write A Python Program To Get Starting Number And Ending Number From The User To Display That Number With Proper Sequence.

Example:
User Input: 5 (start), 10 (end)
Output: 5, 6, 7, 8, 9, 10

Problem Statement

Write A Python Program To Get Large Number As Starting And Lower Number As Ending Number, Display Numbers From Large To Lower.

Example:
User Input: 10 (start), 5 (end)
Output: 10, 9, 8, 7, 6, 5

Problem Statement

Write A Python Program To Display Numbers From 1 To 30, Only Odd Numbers.

Problem Statement

Write A Python Program To Get 5 Subject Marks, Store Them Into Array, And Also Get Student Name.
Find Total And Display Each Subject's Marks.

Expected Result:

```
Hi [username]!
Your total marks are: ...
See your all subject marks:
English = ...
AI = ...
Physics = ...
Computer = ...
Math = ...
```

Problem Statement

Write A Python Program To Get 2 Numbers From The User, Find Their Square, Add Both Results, And Display The Final Result.

Problem Statement

Write A Python Program To Get 2 Numbers From The User, Store In Variables, Swap Those Numbers, And Then Display The New Values.

Problem Statement

Write A Python Program To Get Hours And Then Convert Hours To Seconds.

Problem Statement

Write A Program That Performs All Arithmetic Operations On Two Variables.

Problem Statement

Write A Python Program To Find Area Of Triangle.
Formula: (base × height) / 2

Problem Statement

Write Python Program To Find Number Of Days Between Two Dates

---

Problem Statement

Write A Python Program To Get A Sentence From The User, To Reverse That Sentence

---

Problem Statement

Write A Python Program To Get Age From The User In Years, And Convert Age Into Seconds

---

Problem Statement

Write A Python Program To Get A Number From The User To Find Factorial Of That Number

---

Problem Statement

Write A Python Program To Show The Current Date On The User Request

---

Problem Statement

Write A Python Program To Make A Percentage Calculator

Problem Statement

Write A Python Program To Make An Average Calculator

Problem Statement

Write A Python Program To Get First And Last Name From The User And Display Full Name

---

Problem Statement

Write A Python Program To Get A Bio From A User And Count Number Of Characters And Words In Bio Description

---

Problem Statement

Write A Python Program To Calculate Union Of Two Sets
A = {3,2,4,5,6,7,8}
B = {4,12,5,1,6,8}

Problem Statement

Write A Python Program To Get 5 Author Names With Their Book Names And Display The Last Author With Its Book Name

---

Problem Statement

Write A Python Program To Get Memory In GB Then Convert GB Into Bytes

---

Problem Statement

Write A Python Program To Get Different Information Of Students From User And Display All The Student Information In This Order:

```
Name         ---------
Father name  ---------
CNIC         ---------
Age          ---------
Contact      ---------
```

Problem Statement

Write A Python Program To Find Maximum Number From A List Using Function

---

Problem Statement

Write A Python Program To Find Scholarship For Students In Admission In A College Based On Student Marks.

Criteria To Follow:

- Marks = 1100 → Free Education
- Marks > 1000 → 80% Monthly Fee Deduction
- Marks > 900 → 60% Monthly Fee Deduction
- Marks > 800 → 40% Monthly Fee Deduction
- Marks > 700 → 30% Monthly Fee Deduction
- Marks > 600 → No Scholarship

Problem Statement

Write A Python Program To Find Area And Perimeter Of A Square Using Function
Formula: $A = L^2$, $P = 4a$

Problem Statement

Write A Python Program To Create A List, Pass It To A Function As Parameter To Display Its Elements In Reverse Order

---

Problem Statement

Write A Python Program To Find Sum Of Two Numbers (Numbers Should Be Positive And Less Than 50)

Problem Statement

Write A Python Program That Accepts Six Identity Numbers Of Students As Input And Displays Them In Descending Order

---

Problem Statement

Write A Python Program To Create A File And Write Username And Age In That File

---

Problem Statement

Write A Python Program To Calculate Intersection Of Two Sets
A = {5,2,4,6,7,1}
B = {5,3,11}

Problem Statement

Write A Python Program To Check Duplication Of Student Identity In A Student List

---

Problem Statement

Write A Python Program To Count A Specific Word Or Character In A Sentence

---

Problem Statement

Write A Python Program To Shuffle A List Of Different Color Codes

---

Problem Statement

Write A Python Program To Get A Sentence From User, Display The Last Character Of That Sentence, And Also Display All Characters One By One

---

Problem Statement

Write A Python Program To Find The Second Position Of A Student In A List And Display Their Marks

---

Problem Statement

Write A Python Program To Clone Or Copy A List Containing 10 Colors

---

Problem Statement

Write A Python Program To Display Numbers That Are Divisible By 3 From A List

---

Problem Statement

Write A Python Program To Check If The First And Last Number Of A Tuple Is The Same Or Not

---

Problem Statement

Write A Python Program To Get A Number And Return Its Next And Previous Numbers

---

Problem Statement

Write A Python Program To Print The First And Last Characters From A String

---

Problem Statement

Write A Python Program To Calculate Difference Of Two Sets
A = {1,12,2,6,7,8}
B = {15,0,1,3,6}

Problem Statement

Write A Python Program To Print Characters From A String That Are Present At An Odd Index

---

Problem Statement

Write A Python Program To Find The Sum Of The First And Last Numbers In A List

---

Problem Statement

Write A Python Program To Append Numbers Divisible By 5 And 7 From Range (10, 100) To A New List

---

Problem Statement

Write A Python Program To Get Names From A List That Start With ‘f’

Problem Statement

Write A Python Program To Get Name From User, Check If It Is In Uppercase, If Not Then Convert It Into Uppercase

---

Problem Statement

Write A Python Program To Get Names From A List That End With ‘n’

Problem Statement

Write A Python Program To Search Any Character (Or Set Of Characters) From A String

---

Problem Statement

Write A Python Program To Get A Sentence From User, The System Should Display Only First Ten Characters

---

Problem Statement

Write A Python Program To Get A Number From User. The System Should Add Auto Increment To That Number. Half Of The Entered Number Should Be Incremented

---

Problem Statement

Write A Python Program To Generate Even Numbers From 0 To 20 And Odd Numbers From 0 To 20, Then Add Both Generated Numbers And Display The Total Result

---

Problem Statement

Write A Python Program To Get A Number From The User, And Display The Multiplication Table For That Number

---

Problem Statement

Write A Python Program To Get Age Of 10 Students From User And Store In A List. Display Ages That Are Greater Than 14 And Less Than 20

Problem Statement

Write A Python Program To Find Density Of An Object

Problem Statement

Write A Python Program To Find Ceiling Of A Number

Problem Statement

Write A Python Program To Find Acceleration Of An Object Having Velocity `v` In Time `t`

Problem Statement

Write A Python Program To Find Force Of A Man On An Object Using Mass And Acceleration
Formula: F = ma

Problem Statement

Write A Python Program To Get A Number From User And Display Its Multiplication Table In Reverse Order
Example:

```
2 * 10 = 20
2 * 9 = 18
...
```

Problem Statement

Write A Python Program To Get 10 Data Items From User. Show How Many Are Integer, Float, And String Types In The List

---

Problem Statement

Write A Python Program To Find The Middle Element From A List

---

Problem Statement

Write A Python Program To Count Prime Numbers From 1 To 100

Problem Statement

Write A Python Program To Get Only Uppercase Words From User And Store Them In A List

Intermediate Level

Problem Statement

Write a Python Program To Get Any File With Extension, To Display Only That File Extension.

Problem Statement

Write a Python Program To Find Gravitational Force.

Problem Statement

Write a Python Program To Create a List at Runtime, Display List Elements, and Also Find Max and Min Item From a List of Integers Using OOP.

Problem Statement

Write a Python Program To Find Addition of List Elements to Create a New List. Add Elements Like 1st + 2nd, 2nd + 3rd, 3rd + 4th, etc.

Problem Statement

Write a Python Program To Get a Length in mm and Convert to m and km.

Problem Statement

Write a Python Program To Find the Most Occurring Element in a Given List of Numbers.

Problem Statement

Write a Python Program To Create a Parameterized and Non-Parameterized Constructor.

Problem Statement

Write a Python Program To Create a Class of Student Having Two Data Members (Name and ID), and Two Methods: One to Get, Another to Display Name and ID.

Problem Statement

Write a Python Program To Get a Number From User, and Display Square of Its Previous and Next Numbers.

Problem Statement

Write a Python Program To Count Any Item From a Nested List.

Problem Statement

Write a Python Program To Get a Word From User That Contains Both Lowercase and Uppercase Letters. Then Convert Lower to Upper and Upper to Lower.

Problem Statement

Write a Python Program To Count Total Number of Lists in a Nested List.

Problem Statement

Write a Python Program To Create a Nested List and Access Nested List Item.

Problem Statement

Write a Python Program To Get Temperature in Fahrenheit and Convert Into Centigrade and Kelvin.

Problem Statement

Write a Python Program To Access Multiple Elements From a List.

Problem Statement

Write a Python Program To Get 5 Numbers From User to Store in a List. Display All the Numbers With Power of 3 Using List Comprehension.

Problem Statement

Write a Python Program To Create a Nested Dictionary and Access Value.

Problem Statement

Write a Python Program To Print Dictionary Items Line by Line. Key and Value Should Have One Tab Distance.

Problem Statement

Write a Python Program To Filter Odd Numbers From a Given Dictionary’s Keys. Display Only the Values With Odd Keys.

Problem Statement

Write a Python Program To Get the Total Length of All Keys in a Dictionary With String Keys.

Problem Statement

Write a Python Program To Convert a Dictionary’s Keys and Values Into Two Lists: One for Keys and One for Values.

Problem Statement

Write a Python Program To Find Maximum Key in a Dictionary (Where Keys Are Numbers).

Problem Statement

Write a Python Program To Update Any Value in a Dictionary Based on User Input.

Problem Statement

Write a Python Program To Calculate Circumference and Area of a Circle.

Problem Statement

Write a Python Program To Create a Dictionary, Find the Addition of All Keys and Product of All Values.

Problem Statement

Write a Python Program To Create a Dictionary That Displays Only Values Containing a Vowel Character.

Problem Statement

Write a NumPy Program To Check Whether an Element is NaN or Not.

Problem Statement

Write a NumPy Program To Create an Array of Zeros Based on a User-Entered Number.

Problem Statement

Write a Python OOP Program To Get a Number From User and Display Its Multiplication Table.

Problem Statement

Write a Python Program To Use the `isidentifier()` Method With a String.

Problem Statement

Write a Python Program To Create a Dictionary From an Existing Dictionary That Displays the Length of Words as Values.

Problem Statement

Write a Python Program To Create a Dictionary From a List That Displays the Square of Each Number as Its Value.

Problem Statement

Write a Python Program To Create a List From an Existing List That Contains Numbers Greater Than 5 and Less Than 20.

Problem Statement

Write a Python Program To Create a List From an Existing List That Contains Only Uppercase Words.

Problem Statement

Write a Python Program To Store Student Records. Allow the User to Delete Any Student Record at Runtime.

Problem Statement

Write a Python Program To Create a Set That Displays Only Even Numbers.

Problem Statement

Write a Python program to append elements to an existing array.

Problem Statement

Write a Python program to display each element of a list with its occurrence count.

Problem Statement

Write a Python Pandas program to convert a NumPy array to a Pandas series.

Problem Statement

Write a Python Pandas program to find the transpose of an array.

Problem Statement

Write a Python program to display only those numbers divisible by 4 or 5 from a list, using list comprehension.

Problem Statement

Write a Python program to update a specific key in a dictionary.

Problem Statement

Write a Python program to convert an array from float data type to integer data type.

Problem Statement

Write a Python program to create an Excel file using the `xlsxwriter` library.

Problem Statement

Write a Python program to read an Excel file using the `xlwings` library.

Problem Statement

Write a Python program to write data to a specific cell in an Excel file using `xlsxwriter`.

Problem Statement

Write a Python program to insert an element before each element in a list.

Problem Statement

Write a Python program to read a specific column's data from an Excel file.

Problem Statement

Write a Python program to perform different operations on an Excel file.

Problem Statement

Write a Python program to find the maximum and minimum number from an Excel file.

Problem Statement

Write a Python program to display positive and negative numbers from a list using list comprehension.

Problem Statement

Write a Python program to count the number of instances of a Python class.

Problem Statement

Write a Python program to get an email from the user and validate that it contains a proper format with `@` and `.`.

Problem Statement

Write a Python program to read a CSV file and display its contents as a list.

Problem Statement

Write a Python program to multiply each number in a list by a user-entered number.

Problem Statement

Write a Python program to update a cell value in a CSV file.

Problem Statement

Write a Python program to get 10 numbers from the user, store them in a list, and combine them into one number.
Example: `[1,2,3,4,5,6,7,8,9,10]` → `12345678910`

Problem Statement

Write a Python program to get column names from a CSV file.

Problem Statement

Write a Python program to convert JSON data into a Python object.

Problem Statement

Write a Python program to retrieve information about the operating system.

Problem Statement

Create a desktop Python program to create a window and set its title.

Problem Statement

Create a desktop Python program to create a window and insert text into it.

Problem Statement

Create a desktop Python program to make a window resizable.

Problem Statement

Write a Python program to reverse a substring from a string.

Problem Statement

Create a desktop Python program to create a window with fixed geometry and disable resizing.

Problem Statement

Create a desktop Python program to insert a button in a window. When the button is clicked, a function should execute.

Problem Statement

Create a desktop Python program to insert a button in a window that will close the window when clicked.

Problem Statement

Create a desktop Python program to insert an image as a button in a window.

Problem Statement

Write a desktop Python program to create checkboxes.

Problem Statement

Create a desktop Python program to insert an image in a window.

Problem Statement

Write a desktop Python program to get the first and last name from the user and display the full name.

Problem Statement

Write a desktop Python program to get two numbers from the user and display the remainder after division.

Problem Statement

Write a desktop Python program to get a character from the user and check whether it is a vowel or not.

Problem Statement

Write a Python program to get a string from the user which starts and ends with a number.

Problem Statement

Write a Python program to sort a dictionary by keys.

Problem Statement

Write a desktop Python program to get a year from the user and check whether it is a leap year or not.

Problem Statement

Write a Python program to find the size of an array in bytes.

Problem Statement

Write a Python program to count occurrences of an element in an existing array.

Problem Statement

Write a Python program to display odd numbers from an array.

Problem Statement

Write a Python program to remove a specific element from an array.

Problem Statement

Write a Python program to reverse elements of an array.

Problem Statement

Write a Python program to find the maximum number in an array.

Problem Statement

Write a Python program using OOP to check whether a user-entered number is divisible by 5 or not.

Problem Statement

Write a Python program using OOP to check whether a user-entered number is a multiple of 2 and 3.

Problem Statement

Write a Python program to find the average of 5 numbers.

Problem Statement

Write a Python program to find the roots of a quadratic equation.

Problem Statement

Write a Pandas program to perform basic arithmetic operations on two Pandas series.

Problem Statement

Create a desktop application in Python to get a username from the user. The username should contain only alphanumeric characters.

Problem Statement

Create a desktop application in Python to get a string from the user and save it in a text file.

Problem Statement

Create a web application in Python to create a database table for students and store their information.

Problem Statement

Create a web application in Python to create a superuser and access the Django admin area.

Problem Statement

Write a Python program to get 5 numbers from the user, store them in a list, convert to a Pandas series, and change the default index to alphabetical characters.

Problem Statement

Create a web application in Python to display different web pages such as Home, Contact Us, and About Us.

Problem Statement

Write a Python program to find the keyword density in an article.

Problem Statement

Write a Pandas program to add new data to an existing Pandas series.

Problem Statement

Write a Python program to get 3 color codes and their names from the user, store them in a dictionary, and convert it into a Pandas series.

Problem Statement

Write a Python program to get the current user of the computer.

Problem Statement

Write a Python program to get a file name from the user that does not contain spaces.

Problem Statement

Write a Python program to get a paragraph from the user and find:

- Total characters
- Total characters without spaces
- Total words
- Total spaces

Problem Statement

Create a web application to display Django user data in a table.

Problem Statement

Create a web application in Python to get the prices of 10 products from the user and display the total bill with a discount percentage functionality.

Problem Statement

Write a Python program to count the total number of uppercase and lowercase characters in a string.

Problem Statement

Write a Python program to generate an OTP on user request.

Problem Statement

Write a Python program to display an image using OpenCV.

Problem Statement

Write a Python program to generate a strong password. The password length should be provided by the user.

Problem Statement

Write a Python program to find the resolution of an image.

Problem Statement

Write a Python program to blur an image.

Problem Statement

Write a Python program to rotate an image.

Problem Statement

Write a Python program to load a CSV file using Pandas, print its shape, and display the data as a string.

Problem Statement

Write a Python program to generate a random number and display a message if it matches a user-provided number.

Problem Statement

Create a web application to get a sentence from the user, convert it into uppercase, and also display:

- Length of the sentence
- Total spaces

Problem Statement

Write a Pandas program to create a subset of a given series.

Problem Statement

Create a web application in Django to register a user.

Problem Statement

Create a web application in Django to add logout functionality.

Problem Statement

Write a Python program to get an alphabetic character from the user and check if it is in the range `a` to `f`.

Problem Statement

Write a Python program to get a string from the user that starts with the character `f` and ends with one or more `z` characters.

Problem Statement

Write a Python program to get a sentence and a character (or set of characters) from the user and check if the sentence ends with that character(s).

Problem Statement

Write a Python program to find sequences of uppercase and lowercase letters, where lowercase letters must appear at the end.

Problem Statement

Write a Python program to find a string that contains the character `m`, followed by anything (optional), and ends with `0`.

Problem Statement

Write a Python program to check whether a string starts with a letter (`a-z` or `A-Z`), a digit (`0-9`), or an underscore _.

Problem Statement

Write a Pandas program to convert a Pandas series to a Python list.

Problem Statement

Write a Python program to match a word that contains the letter `m`.

Problem Statement

Write a Python program to match a string that contains uppercase letters, lowercase letters, numbers, and underscores. Ignore whitespace and punctuation.

Problem Statement

Write a Python program where a string must start with a specific number.

Problem Statement

Write a Python program to match numbers from 0 to 5 at the end of a string.

Problem Statement

Write a Python program to display an image using the PIL (Python Imaging Library).

Problem Statement

Write a Python program to write text on an image.

Problem Statement

Write a Python program to check whether a password is strong or weak.

Problem Statement

Write a regular expression program in Python to search for the following pattern in a string:
Anything (optional) → Number → Underscore → Uppercase

Problem Statement

Write a Python program to create an empty class.

Problem Statement

Write a Python program to perform a linear search on a list.

Problem Statement

Write a Python program to find the union, intersection, and difference of two sets.

Problem Statement

Write a Python program to play a sound.

Problem Statement

Write a Python program to play a `.wav` file using the `pydub` library.

Problem Statement

Write a Python program to open a URL using the `urllib` library.

Problem Statement

Write a Python program to extract the HTML content of a web page.

Problem Statement

Write a Python program to display the title of any web page using web scraping.

Problem Statement

Write a Python program to print the memory usage of an object.

Problem Statement

Write a Python program to get the creation date and time of a file.

Problem Statement

Write a Python program to read content from one file and write it into another file.

Problem Statement

Write a Python program to save a dictionary to a text file.

Problem Statement

Write a Python program to check the size of a file.

Problem Statement

Create a web application in Python to display a "Hello, World!" message.

Problem Statement

Write a Python program to read a specific line from a file.

Problem Statement

Create a web application in Python to find the union and intersection of two sets:

```
A = {3,2,4,5,6,7,8}
B = {4,12,5,1,6,8}
```

Problem Statement

Create a web application in Python to get age from the user. If age is less than 18, do not allow participation and display how many years are left until eligible.

Problem Statement

Create a web application in Python to calculate the area of a circle using the formula πr^2.

Problem Statement

Create a web application in Python to get a name from the user and convert it into encrypted form.

Problem Statement

Write a Python program to get a word from the user that does not contain any vowel. Save that word into a file.

Problem Statement

Write a Python program to create a list and allow the user to perform the following operations:

1. Display all items
2. Insert an item
3. Update an item

Problem Statement

Write a Python program to get a string from the user and find sequences of numbers with length 5 or more.

Problem Statement

Write a Python program to get a number from the user and display its multiplication table in a file. Also, find the product of all results from the table.

Problem Statement

Write a Python program to get 10 numbers from the user, store them in a list, and find the sum, product, min, max, first, and last number. Display each result in a file.

Problem Statement

Write a Python program to count the number of vowels in a word.

Problem Statement

Write a Python program to take a string from the user and search it in a file.

Problem Statement

Create a web application in Python to get marks of 6 subjects from the user, and calculate total and average marks.

Problem Statement

Create a web application in Python to get two numbers from the user, find their squares, add the results, and display the cube of the sum.

Problem Statement

Create a web application in Python to get a number from the user. Half of the entered number should be incremented, and added to the original number.

Problem Statement

Create a web application in Python to calculate the acceleration of an object using velocity (v) and time (t). Display unit as `m/s²`.

Problem Statement

Create a web application in Python to find the force applied by a person on an object using mass and acceleration. Display unit as `Newton`.

Problem Statement

Create a web application in Python to sum the numbers in a list that are greater than 5 and less than 10.

Problem Statement

Create a web application in Python to display all student names from a list, except names starting with 'aa'.

Problem Statement

Create a web application in Python to sort student names in ascending order and display only those with 5 characters.

Problem Statement

Create a web application in Python to get 3 author names with their book titles and display them together.

Problem Statement

Create a web application to get two numbers from the user and perform all arithmetic operations.

Problem Statement

Create a web application in Python to get multiple words from the user and display only those that are in uppercase.

Problem Statement

Create a desktop application in Python to get two numbers from the user and find the maximum and minimum. If the numbers are equal, display a message: "Numbers are equal."

Problem Statement

Create a desktop application in Python to count total number of words, spaces, and characters (including spaces) in a string entered by the user.

Problem Statement

Create a desktop application in Python to get a number from the user and display its multiplication table.

Problem Statement

Create a desktop application in Python to display different types of message boxes in Yes/No format.

Problem Statement

Create a desktop application in Python to display various types of message boxes.

Problem Statement

Create a desktop application in Python that displays a dialog box asking the user to enter an integer and displays its square in the console.

Problem Statement

Create a desktop application in Python that displays a dialog asking the user to enter their name and age, then display the message:
Hi NAME! Your age is AGE

Problem Statement

Write a desktop application in Python to create a Listbox widget.

Problem Statement

Write a desktop application in Python to create a Progress Bar widget.

Problem Statement

Write a Python program to get 5 items from a list and display them to the user, excluding the first, last, and those with odd-length names.

Problem Statement

Create a web application in Python to get a number from the user and find the factorial of that number.

Problem Statement

Create a desktop application in Python to get a number from the user and check whether it is divisible by 2 and 3.

Problem Statement

Create a desktop application in Python to get student marks and determine the grade based on the following criteria:

- ≥ 95: A+
- ≥ 80: A
- ≥ 70: B

- ≥ 60: C
- < 60: Fail

Problem Statement

Create a desktop application in Python to generate 10 numbers and display their squares.

Problem Statement

Create a desktop application in Python to get 5 color names from the user, store them in a list, and display each color name along with its character count.

Problem Statement

Create a desktop application in Python to get 5 color names from the user and display all colors except the first and last.

Problem Statement

Create a desktop application in Python to get a string from the user. Convert it into lowercase. If it is already in lowercase, display a message:
"String is already in lowercase."

Problem Statement

Create a desktop application in Python to get 5 numbers from the user, store them in a list, and display only the even numbers.

Problem Statement

Create a desktop application in Python to get a string from the user and check whether it contains spaces.

Problem Statement

Create a desktop application in Python to get 5 numbers from the user, store them in a list, calculate their sum and product, and display the result.
